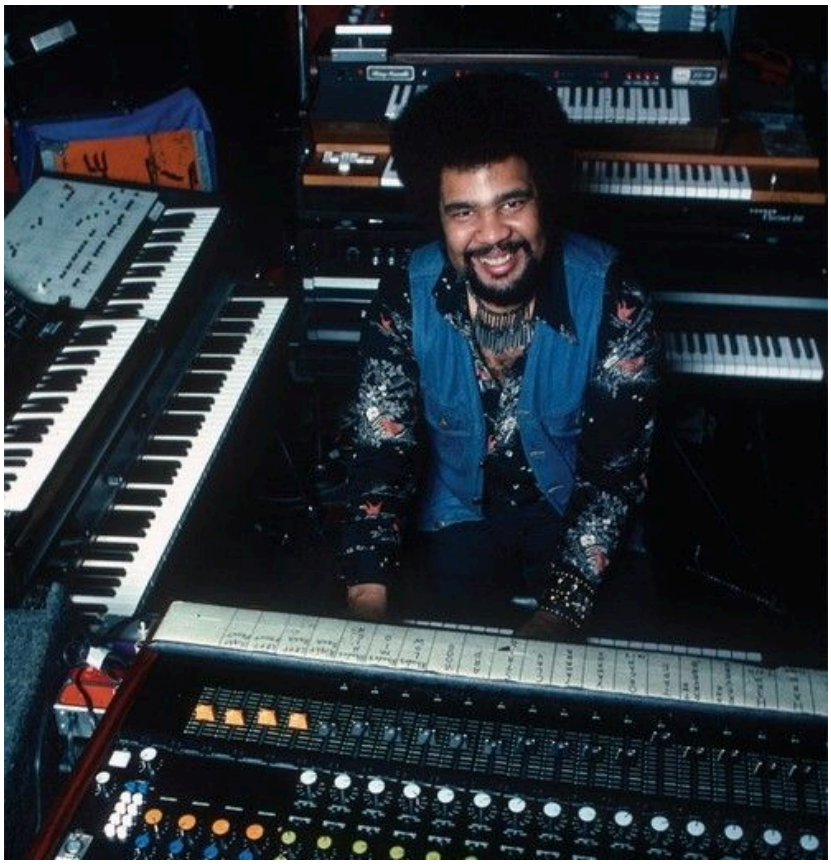
YAMAHA PM 1000 MIXER

EX Mixer from 'ELECTRIC LADY' Studio in New York /USA (Jimmy Hendricks)
Mod with direct outputs



"I was fortunate to come across this piece of history gear with a hidden gem outstanding high end pre AMPS, trading one of my custom Fender Jazz bass with the acclaimed owner Ben Baptie - producer sound engineer in London - that brought this console from Electric Lady music studios in New York, where he worked as a house engineer and producer for years.
This pre amps and console recorded so many famous bands, that loved tracking trough out this console known as JapaNeve, the console has a meaty sound, full of character, apparently the most expensive components (70s Golden era) with a distinct high end qualities from Yamaha ever made."
